Note: The standard errors in this table were generated using mse in the variance calculations (a method by which the variance is computed by using deviations of the replicates from the observed value of the statistics based on the entire dataset) and thus may not match those on the First Look publication, which were generated in STATA using the default method (which calculates the variance by using deviations from the average of the replicates). The mse option is specified in the svyset command in STATA.

NOTE: Rows may not add up to 100% due to rounding.
